EnSight Training

… analyze, visualize, communicate…

EnSight

New to EnSight?

Tried EnSight a bit, but not get too far?

Sharpen your EnSight skills?

CEI will be onsite at LLNL April 26th and 27th to provide hands on training and desk-side visits.
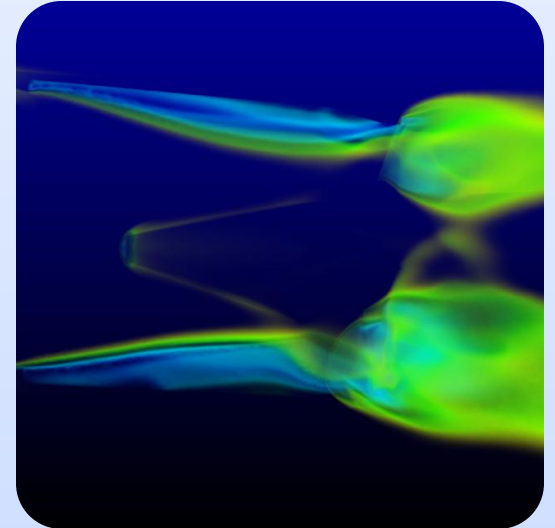

CEI is holding an EnSight 9.1 training course at Lawrence Livermore National Lab. We will be providing a hands on training course centering around new features in EnSight 9.0 and 9.1, volume rendering, Python integration, large model analysis techniques, parallel post processing and other attendee specific topics.

In addition to the training, a member of CEI's staff will be available both days for desk-side personal visits in the Classified area to help with any specific user or dataset related questions, issues or requirements.

The training is free of charge, and will be held at onsite at LLNL on April 26 and 27th.

People interested in attending the training or having desk-side visits should contact Kevin Colburn at kevin@ensight.com for further details.
